Design and Analysis of Network Systems

Week 03

Foundation of Networking Continued

Review the Slides of Weeks 01 and 02 to make sure you have a good broad based understanding of Networking concepts and embedded technologies .

Further Reading and References

- The first two weeks of lectures provided a recap on networking under Foundation of Networking. For more on networking technologies, refer to the books listed in the first lecture or other resources!
- For Week 02 material, the texts listed at the earlier lecture provide good sources for all the covered material.
- Book by Tanenbaum and Wetherall is a source for many of the figures in the slides here and is specially a good source for the covered material.
- For more thorough understanding and details on a topic, the best sources are often the standards documents on a topic, e.g., DOCSIS standards for data over cable.

Next

- Next week we start on the process of network design. Read Chapter 1 of the McCabe Text Book.
